Assistant Professor

INTRODUCTION

The Plan My Trip – Day-by-Day Travel Planner is a web-based application designed to simplify and automate travel planning. In traditional methods, users spend a lot of time researching destinations, accommodations, food options, and activities across multiple platforms. This system eliminates that effort by providing a centralized solution where users can generate a complete travel plan instantly.

The application allows users to enter basic details such as destination, number of days, budget level, and travel season. Based on these inputs, the system automatically generates a structured itinerary, including daily activities, food suggestions, budget estimation, and travel tips.

PROBLEM DESCRIPTION

Travel planning is often a complex and time-consuming process. Users need to search multiple websites to gather information about destinations, attractions, food, and accommodation. This leads to:

- Wastage of time and effort
- Lack of proper planning and organization
- Missing important tourist attractions
- Incorrect or unclear budget estimation
- Poor time management during trips

Additionally, there is no guarantee that all necessary details are covered, which can lead to a stressful travel experience. Hence, there is a strong need for an automated system that can generate a complete, reliable, and personalized travel plan in one place.

OBJECTIVES

- To design and develop a smart travel planning system
- To automate the generation of day-by-day travel itineraries
- To provide accurate budget estimation including accommodation, food, transport, and activities
- To recommend must-visit places and local cuisines for better travel experience
- To provide season-based packing tips and travel suggestions
- To create a user-friendly and responsive interface
- To reduce manual effort and improve planning efficiency.

EXPECTED OUTCOMES

After implementing the system, the following outcomes are expected:

- Users can generate a complete travel itinerary within seconds
- Significant reduction in time spent on travel research
- Better budget planning and expense management
- Organized daily schedules leading to improved time utilization
- Enhanced travel experience with proper guidance and suggestions
- Increased user satisfaction due to ease of use and reliability.
- The system ensures that users have a stress-free and well-planned journey.

ALGORITHM

The system follows a step-by-step process to generate travel plans:

1. User enters inputs (destination, days, budget, season)
2. System validates the inputs
3. Attractions are selected based on destination
4. Activities are divided into morning, afternoon, and evening
5. Food and dining suggestions are added
6. Budget is calculated based on selected options
7. Final itinerary is generated and displayed

IMPLEMENTATION

The system is implemented using modern web technologies:

- Frontend: React.js, HTML, CSS, JavaScript
- Backend: Java (Servlets & JSP)
- Database: MongoDB
- Server: Apache Tomcat

The interface includes:

- Input form for user details
- Generated itinerary display
- Budget breakdown section
- Packing tips and recommendations

IMPLEMENTATION

 **Plan My Trip**
Why hire a guide? We've got you covered.

Destination: Manali, Himachal Pradesh
Duration (Days): 3 Days
Budget Level: Mid-Range (₹3-6k/day)
Travel Season: Winter (Oct-Feb)
